

EMPLOYER / REVIEWER PACKET

Japanese Kanji Anki Builder

Program identity: Governed data pipeline / release-controlled content generation system

Distribution artifact: JLPT kanji and vocabulary study content for Anki

Evidence mode: Read-only document generation from live commands and tracked docs

Generated: 2026-06-11 America/Chicago

Repo commit: a824d0bc data(words): expand n3 silver batches 35-41

Scope: Whole program: kanji and word decks, proof/governance, release-trust boundaries

Bottom line: This repository is not merely a deck. It is a governed content data system that keeps generated surfaces, review lanes, proof ledgers, media identity, source evidence, NLP support, and release claims separate.

1. Sixty-Second Read

A reviewer should understand the project as backend/data/product engineering: a controlled system that turns tracked contracts and curated local inputs into deterministic study artifacts, then protects trust claims through explicit gates and proof ledgers.

Signal	Verified state	Why it matters
System type	Governed data pipeline and release-controlled content generation system.	Evaluates as software/data architecture, not a static flashcard file.
Whole-program scale	2212 generated kanji rows and 1470 generated word rows across JLPT N5-N1.	The system covers multiple product surfaces and keeps denominators visible.
Locked scope	v0.2.0 freezes N5-N2 core kanji and N5-N4 words as scoped Obsidian-certified release content.	Release claims are bounded instead of implied across unfinished work.
Proof storage	Canonical JSONL ledger validates with 1969 events across 6 files.	Certification evidence is tracked, queryable, and replayable.
Support boundary	NLP governance passes, but it cannot certify cards or write tracked templates.	Automation supports review without becoming unchecked authority.

2. Architecture

The pipeline separates input authority, generated surfaces, review certification, proof storage, and release packaging. The diagrams below are derived from tracked architecture docs and live command posture.

Governed Content Generation Pipeline

Distribution output is Anki content; trust comes from contracts, gates, proof ledgers, and release boundaries.

Figure 1. Governed content generation pipeline. Source: docs/system-architecture.md plus live closeout/proof commands.

Product Surfaces And Lane Scope

Whole-program status from live commands on 2026-06-11. Counts are generated denominators, not release claims.

Figure 2. Product surfaces and lane scope. Counts use live commands from this run; stale tracked docs still need count refresh where noted.

3. Current Product State

Surface	Generated	Gold	Sapphire	Platinum	Obsidian / proof boundary
Kanji N5	80/80	80/80	80/80	80/80	Locked scope; Obsidian certified.
Kanji N4	212/212	212/212	212/212	212/212	Locked scope; Obsidian certified.
Kanji N3	341/341	341/341	341/341	341/341	Locked scope; Obsidian certified.

Surface	Generated	Gold	Sapphire	Platinum	Obsidian / proof boundary
Kanji N2	349/349	349/349	349/349	349/349	Locked scope; Obsidian certified.
Kanji N1	1230/1230	1230/1230	328/1230	328/1230	No trusted Obsidian proof counted; 902 rows need current Sapphire and Platinum first.
Word N5	287/287	287/287	287/287	287/287	Locked scope; Obsidian certified.
Word N4	700/700	700/700	700/700	700/700	Locked scope; Obsidian certified.
Word N3	429/429	8/429	8/429	8/429	Forward backlog; Obsidian proof not recorded.
Word N2	28/28	0/28	0/28	0/28	Forward backlog; Obsidian not started.
Word N1	26/26	0/26	0/26	0/26	Forward backlog; Obsidian not started.

4. Proof And Governance State

Check	Result	Evidence
Proof ledger validation	PASS	1969 proof events across 6 JSONL files.
Kanji proof reconciliation N5-N2	PASS	982 ledger proofs bound; 0 mismatches.
Word proof reconciliation N5-N4	PASS	987 ledger proofs bound; 0 mismatches.
Kanji Obsidian certification N5-N2	PASS	982/982 Obsidian certified; 0 needs Obsidian; 0 blocked/failing.
Word Obsidian certification N5-N4	PASS	987/987 Obsidian certified; 0 needs Obsidian; 0 blocked/failing.
NLP governance gate	PASS	8 checks pass; certifies cards: no; writes tracked templates: no.
Performance/memory matrix	PASS	7 lanes pass as governance map; not a release-readiness claim.
Release trust	FAIL-CLOSED	Open release blockers: SEC-P0-004, PROD-REL-001, SEC-REQ-007.

Important limitation: The proof ledger and Obsidian status commands certify scoped content proof only. They do not prove APKG import, mobile behavior, accessibility, listening quality, hosted CI status, source-evidence depth completion, or broader release readiness.

5. Word Reading And Expansion Posture

Level	Inventory	Built	Readiness	Reading coverage	Notes
N5	287	287/287	ready; deferred variants	67.7% (233/344)	Active triage cleared; exact command label preserved in appendix.
N4	700	700/700	ready; deferred variants	76.7% (579/755)	Active triage cleared; exact command label preserved in appendix.
N3	429	429/429	incomplete	34.9% (413/1184)	Silver expansion exists; forward review lanes are 8/429.
N2	28	28/28	incomplete	5.4% (56/1045)	Forward review lanes not started.
N1	26	26/26	incomplete	1.3% (41/3274)	Forward review lanes not started.

6. Explicit Limitations

Limitation	Verified handling
Tracked-doc count drift	docs/employer-overview.md and docs/system-architecture.md still say 1400 word rows. Live commands now show 1470. Update tracked docs before sending them as the sole external evidence.
Generated artifact dirtiness	git status is not clean because generated outputs/ artifacts exist. Tracked source excluding outputs remains clean.
Release readiness	security:release-trust fails closed on two high/critical release-blocker risks and one unimplemented release-blocker requirement.
Manual QA	APKG import, mobile, accessibility, listening, and managed-media review are not proven by these commands.
NLP	NLP artifacts are support-only. Passing NLP governance does not certify a card or mutate tracked templates.
Unfinished lanes	Expected coverage failures remain visible for N1 kanji Sapphire/Platinum and N3/N2/N1 word Gold/Sapphire/Platinum.

7. Reviewer Route

Use this packet as an orientation layer, then verify with the commands in the appendix. The strongest tracked human-facing docs are README.md, docs/employer-overview.md, docs/system-architecture.md, docs/releases/v0.2.0-scoped-obsidian-lock.md, docs/product-exit-criteria.md, docs/verification.md, and docs/release-process.md.

For a hiring reviewer, the most important engineering signal is not the existence of cards. It is the system's refusal to collapse generated output, structural checks, learner-surface inspection, proof-ledger certification, and release readiness into one vague claim.

Appendix A. Live Command Evidence

Command	Classification	Packet use
git status --short --branch	PASS	main tracking origin/main; generated outputs/ present.
git status --short --branch -- .:(exclude)outputs	PASS	Tracked source clean when generated outputs are excluded.
git log -1 --oneline --decorate	PASS	a824d0bc data(words): expand n3 silver batches 35-41.
git ls-remote --heads origin	PASS	Remote heads show main at a824d0bc5ee8f405cf3aac2e00ac111251b0cf7.
npm run deck:closeout -- --levels=5,4,3,2,1	PASS / expected gaps	Reports whole-program lane counts; expected coverage failures remain visible.
npm run data:obsidian:proof:validate	PASS	1969 proof events, 6 files.
npm run data:obsidian:proof:reconcile -- --levels=5,4,3,2	PASS	982 kanji proofs bound, 0 mismatches.
npm run data:obsidian:proof:reconcile -- --deck-kind=word --levels=5,4	PASS	987 word proofs bound, 0 mismatches.
npm run deck:kanji:obsidian:certify-status -- --levels=5,4,3,2	PASS	982/982 certified for locked kanji scope.
npm run deck:words:obsidian:certify-status -- --levels=5,4	PASS	987/987 certified for locked word scope.
npm run nlp:governance-gate	PASS	8 checks pass; support-only boundaries explicit.
npm run perf:memory:matrix	PASS	7 governance lanes pass; benchmark authority remains separate.
npm run security:release-trust	EXPECTED FAIL-CLOSED	SEC-P0-004, PROD-REL-001, and SEC-REQ-007 remain blockers.
npm run deck:words:completion:n5	PASS	N5 ready_with_deferred_variants; reading coverage 67.7%.
npm run deck:words:completion:n4	PASS	N4 ready_with_deferred_variants; reading coverage 76.7%.
npm run deck:words:completion:n3	PASS / incomplete	N3 generated 429/429; reading coverage 34.9%; forward lanes 8/429.
npm run deck:words:completion:n2	PASS / incomplete	N2 generated 28/28; reading coverage 5.4%; forward lanes not started.
npm run deck:words:completion:n1	PASS / incomplete	N1 generated 26/26; reading coverage 1.3%; forward lanes not started.

Appendix B. Tracked Document Sources Read

Source	How used
README.md	Project identity, authority boundary, review tiers, current baseline, source-of-truth map.
docs/employer-overview.md	Employer-facing framing; count drift noted against live commands.

Source	How used
docs/system-architecture.md	Architecture maps and lane authority model; count drift noted against live commands.
docs/releases/v0.2.0-scoped-obsidian-lock.md	Frozen release scope and release-ready caveats.
package.json	Command inventory and program description.
outputs/spreadsheets-whole-program-governance	Prior workbook/export contract and visual dashboard previews.

Boundary statement: This packet is an evidence-backed orientation artifact. It does not certify new cards, append proof, change lane counts, update tracked docs, approve release readiness, or replace rerunning the commands above at decision time.
